Title	Client Discussion
Activity type	CPD activity
Category	Professional
From date	18/04/2018
To date	18/04/2018
Credits claimed	3
Hours spent	2
Description	Discussions with client on proposed toxicity study in the juvenile rat
Outcome	Influenced my professional practice
Notes	This client has a drug currently in use for PONV in adults and needs to proceed with studies in juvenile rats in order to include paediatric patients. Client discussed and shared information on the drug including MOA, use, dose-levels, frequency of dose. We discussed proposed study design for the juvenile study and agreed a protocol for inclusion in an initial PSP.
Venue	Office
Has reflective note	Yes
What have you learned	Very useful meeting in which we could understand the client's concerns and discuss possible regulatory requirements based upon particular use and mechanisms of the drug. We could then advise on a plan and provided a considered protocol for inclusion in the PSP.

Title	Client Discussion
Activity type	CPD activity
Category	Professional
From date	02/05/2018
To date	03/05/2018
Credits claimed	3
Hours spent	2
Description	Teleconference/s with client to discuss findings in their rabbit developmental toxicity study
Outcome	Influenced my professional practice
Notes	This client was concerned about particular findings in their study - foetal scoliosis - and how this might affect registration of their drug, We discussed the relevance of this finding to humans and provided relevant published papers on the critical periods of skeletal development in rabbits.
Venue	Office
Has reflective note	Yes
What have you learned	These discussions utilise my professional experience and expertise in that it is my role to provide reassurance, or otherwise, on the findings from a reproduction toxicology studies and their relevance to humans. I learned of the particular concerns of the client with regard to the use and exposure to their drug.

Title	UK IRDG Meeting
Activity type	CPD activity
Category	Professional
From date	08/05/2018
To date	09/05/2018
Credits claimed	9
Hours spent	8
Description	Attendance at the UK IRDG Meeting
Outcome	Influenced my professional practice
Notes	Attended presentations on the current practices and problems encountered within preclinical toxicology studies.
Venue	[REDACTED]
Has reflective note	Yes
What have you learned	This meeting focussed on the new requirements in the OECD studies for the measurement of endpoints to detect endocrine disruptors. Lively discussions regarding the practicalities of collecting these data, the reliability of the data and the scientific relevance. Shared best practices and problems/solutions with others in the industry.

Title	Client Discussion
Activity type	CPD activity
Category	Professional
From date	13/06/2018
To date	19/07/2018
Credits claimed	5
Hours spent	4
Description	Teleconferences and meeting with client to discuss findings in their developmental toxicity studies.
Outcome	Influenced my professional practice
Notes	This client was concerned about particular findings in their dose range-finding developmental toxicity study - foetal defects - and how these might affect setting dose levels in the main regulatory study at doses to give sufficient exposure. I researched the MOA of this drug and discussed the relevance of foetal findings in the rat to the human and the likelihood of these findings being due to chance and/or rat specific.
Venue	Office
Has reflective note	Yes
What have you learned	These discussions utilise my professional experience and expertise in that it is my role to provide reassurance, or otherwise, on the findings from the reproduction toxicology studies and their relevance to humans.

Title	Scientific Discussions
Activity type	CPD activity
Category	Professional
From date	18/07/2018
To date	18/07/2018
Credits claimed	2
Hours spent	1
Outcome	Influenced my professional practice
Notes	Recent updates to the OECD test guidelines for reproduction toxicology studies require measurement of thyroid hormone levels in the developing rodent. This meeting was between scientists - study directors and senior scientists - to discuss methods to be used for these analyses.
Venue	Office
Has reflective note	Yes
What have you learned	This meeting was convened to understand what methods are available and/or possible for measurement of thyroid hormone levels in rodents, the reliability of the data and how they will be reported. With the advent of the OECD regulations, this has become a very big issue since these types of measurements in rodents are inherently variable and therefore, reporting of the data can be open to regulatory questions.

Title	Meeting
Activity type	CPD activity
Category	Professional
From date	10/09/2018
To date	13/09/2018
Credits claimed	19
Hours spent	18
Description	Attendance at the 46th Conference of the European Teratology Society
Outcome	Influenced my professional practice
Notes	Attended presentations on a variety of topics including infectious diseases in pregnancy, ocular teratogens, various free communications, endocrine disruption with a focus on the thyroid, discussions re. alternative testing, discovery toxicology and the microbiome during pregnancy.
Venue	██████████
Has reflective note	Yes
What have you learned	This is the definitive society in Europe for reproduction toxicologists to discuss current topics, present research and exchange data and ideas so that we can ensure that individuals and companies are up to date on the latest developments in the area of reproduction toxicology. A very useful meeting.

Title	Meeting
Activity type	CPD activity
Category	Professional
From date	18/10/2018
To date	19/10/2018
Credits claimed	10
Hours spent	9
Description	Two day meeting hosted by my company for consultants within the field of toxicology
Outcome	Indirectly influenced my professional practice
Notes	This was a meeting of various consultants within the field of preclinical toxicology testing convened by my company in order to disseminate our capabilities. It included sessions on legal matters, study communication, overviews of subject matters and SEND. I presented an overview of reproduction toxicology testing - the What? Why? When?.
Venue	██████████
Has reflective note	Yes
What have you learned	Very useful company initiative to communicate with consultants, each with specific needs and expertise. This helped me understand the different requirements of various agencies and to discuss directly the interaction of consultants with Sequani.

Title	CPD Presentation
Activity type	CPD activity
Category	Professional
From date	28/11/2018
To date	28/11/2018
Credits claimed	3
Hours spent	22
Description	A presentation on the What? Why? When? for reproduction toxicology testing, given by ██████████.
Outcome	Indirectly influenced my professional practice
Notes	This presentation was given by me to new and/or non-reproduction toxicology scientists who work for my company. I gave an overview of what studies are required, why they are required and when in the regulatory process, they are required.
Venue	Office
Has reflective note	Yes
What have you learned	It is part of my role to train new staff and to keep others within the company up to date on current methods. It is important that other staff understand the relevance of these studies to the whole area(s) - both pharmaceutical and agrochemical - of preclinical toxicology and where they fit in with regulatory requirements.
